

Tide sensor pilot

Overview

Synthetic measurements for illustration; not operational or clinical results.

Observed counts

The trial covers two stations. Counts are observations, not percentages.

Station	Observed count	Total or qualifier	Value
North	12	Reported total	31
		Computed total	30
South	18	Difference	1 observation, unresolved
		Reliability	Unavailable

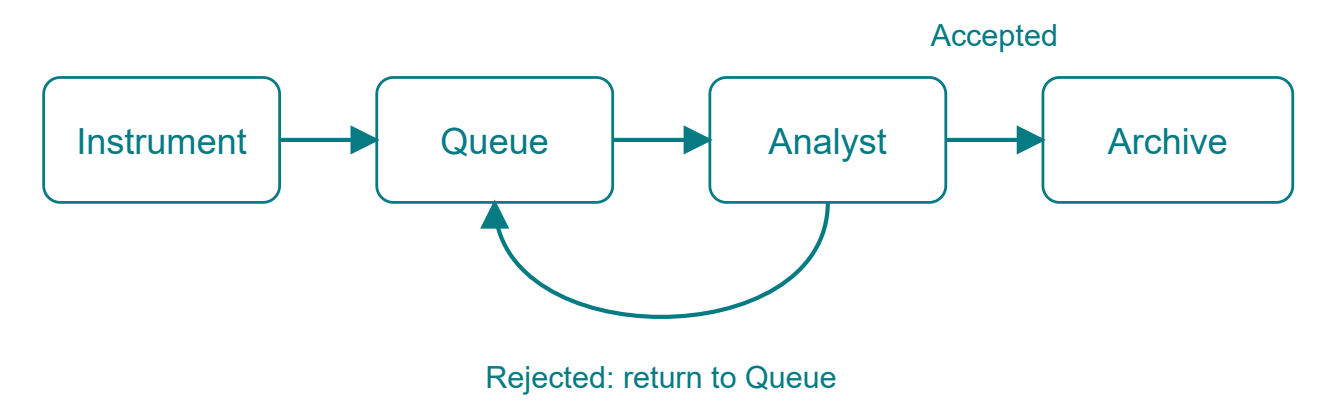

The total remains unresolved

The reported total is 31; the component values sum to 30. The difference of one observation remains unresolved.

Reliability is unavailable.

Report: pilot.docx. Count data: observations.csv.

The review path

Accepted records continue to Archive. Rejected records return to Queue.

Instrument sends observations to Queue; Queue sends them to Analyst; Analyst sends accepted records to Archive. Rejected records return from Analyst to Queue.

Scope and uncertainty

The trial covers two stations. Counts are observations, not percentages. No error bars or confidence intervals were provided.

Item	Status
Stations covered	Two
Measure	Observation counts, not percentages
Error bars	Not provided
Confidence intervals	Not provided
Reliability	Unavailable

Materials: pilot.docx, observations.csv and review-path.svg. Tide Research branding: brand.json and brand.svg. The diagram preserves all four supplied directions.
